

I showed
Gross Sales
Finance called it
Vanity

Problem Statement

DAY 7 / 15

02/08/26

- Yesterday :share of total FY2021 sales by market
- Tables : fact_pre_invoice_deduction
- Finance wants **Net Invoice Sales** , gross after discount

The Trap ❌

- Diving the discounts 100 is a wrong calculation

0.0703 reads as 7 %

Wrong Net Number

Requirment

DAY 7 / 15

02/08/26

1 - discount_pct

Correct math calculation

The Fix

```
ROUND(gsr.gross_sales_mln  
      * ( 1- gsr.pre_invoice_discount_pct), 2)  
net_invoice_sales
```

Bonus Find

DAY 7 / 15
02/08/26

A trap that hides even after the fix

GROUP BY customer_code

+ Fiscal_year

----- one discount rate , one correct row

customer_code only

----- blends every year's rate into one

DAY 7 / 15

02/08/26

A Quick Analogy

Cricket Scoreboard

Price Tag

1000

You Pay

930

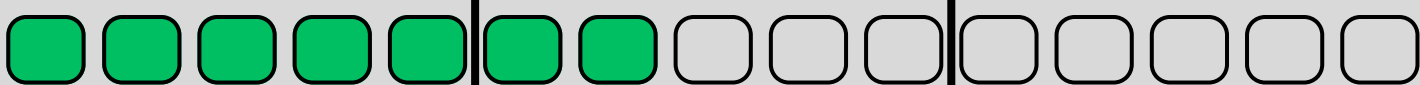

Discount 7 %

Same product ,
different amount after discount

Likewise **net_invoice_sales** reads the bill

```
WITH gross_sales_report AS (  
  SELECT  
    dc.customer_code,  
    dc.customer,  
    dc.market,  
    preivd.pre_invoice_discount_pct,  
    ROUND(SUM(fsm.sold_quantity * fgp.gross_price)/1000000,2) gross_sales_mln  
  FROM fact_sales_monthly fsm  
  JOIN dim_customer dc  
  ON dc.customer_code = fsm.customer_code  
  JOIN fact_gross_price fgp  
  ON fgp.product_code = fsm.product_code  
  AND fgp.fiscal_year = fsm.fiscal_year  
  JOIN fact_pre_invoice_deductions preivd  
  ON preivd.customer_code = fsm.customer_code  
  AND preivd.fiscal_year = fsm.fiscal_year  
  GROUP BY dc.customer_code, fsm.fiscal_year  
  
)  
SELECT  
  gsr.customer_code, gsr.gross_sales_mln,  
  ROUND(gsr.gross_sales_mln * (1 - gsr.pre_invoice_discount_pct),2)  
net_invoice_sales  
FROM gross_sales_report gsr  
ORDER BY gsr.gross_sales_mln DESC;
```
