Problem Statement

DAY 1 / 15

27/07/26

- Sales in fact_sales_monthly (date, product_code, customer_code, sold_quantity), plus dim_customer and dim_product for the names.
- Your manager asks: "pull all sales for **Atliq Exclusive** in **India**."

The Trap

- filter customer = 'Atliq Exclusive' alone pulls every market by the customer name

AtliQ Exclusive 

India 

The Fix : Filter Both Together

WHERE Customer = 'AtliQ Exclusive'
AND market = 'India'

Readability

DAY 1 / 15

27/07/26

Problem Two No names in the fact table

Date | Fiscal Year | Product_Code | Customer_Code | Sold_quantity

Customer_Name ----- Not in this table

Product_Name ----- **Not in this table**

A Quick Analogy

DAY 1 / 15

27/07/26

In India Vijay **Citizen** Tom Holland **Foreigner**

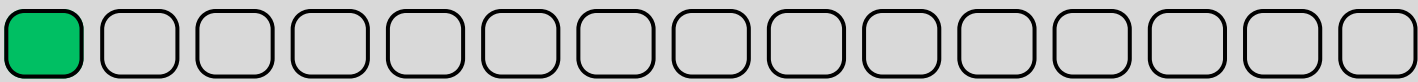

In UK Tom Holland **Citizen** Vijay **Foreigner**

The country changes the label but connects both them in movies

Likewise

Primary Key x Foreign Key

based on the tables

Same Idea in MySQL
